

Curves: median of the sessions' or seeds' median curves, band 10th-90th percentile. Dots: one session (13 per brain group) or training seed (5 per net), each the median of 10 random 50-neuron probes; bars and numbers are medians. 1 = no order beyond chance, 0 = a perfect geometric order. Training moves a net toward chance and toward the brain, about halfway; with both removals the ranges separate.
